HOLTEC SECURITY INTERNATIONAL

Security Special Operations (SSO)

Test Your Defenses. Before Adversaries Do.

The Challenge

Your security plan may look bulletproof on paper. But adversaries don't follow blueprints; they exploit the gaps you didn't know existed. Automation isn't enough; true resilience demands people who are trained, tested, and ready.

Three Elite Capabilities. One Mission-Critical Outcome.

We put your defenses under real-world stress using the same elite tactics that protect nuclear facilities nationwide. Our operators think, move, and strike like actual threats, exposing vulnerabilities before adversaries do so you can fix them on your terms, not theirs.

The Result: Teams that don't just react; they respond with confidence.

CAF Team (Composite Adversary Force)

Regulatory-Grade Threat Simulation

Our CAF specialists replicate every adversarial scenario your facility could face — from coordinated physical breaches to sophisticated insider threats. Built to exceed Reg. Guide 5.69, NEI 0311, and NEI 0505 requirements, our team operates under the same DOE qualification standards that protect America's nuclear infrastructure.

What We Test

- Complex attack scenarios that blend physical infiltration with digital vulnerabilities
- Coordinated team attacks with diversionary elements
- Advanced surveillance detection and counter-surveillance operations
- Insider threat simulations and social engineering vulnerabilities
- Time-sensitive response protocols under stress

The Outcome:

Federal and commercial nuclear-grade readiness without the federal compliance headache.

HOLTEC SECURITY INTERNATIONAL

Security Special Operations (SSO)

Test Your Defenses. Before Adversaries Do.

Red Team Assessments

Covert Penetration. Real Consequences.

Our red team operators infiltrate your facility using the same methods employed by corporate espionage teams, foreign adversaries, and sophisticated criminals. Trained in covert entry, surveillance evasion, alarm bypass, and access system hacking, they expose the gaps that traditional security audits miss.

Capabilities Include:

- Physical penetration testing of static security teams
- Executive protection vulnerability assessments
- Corporate espionage threat replication
- Covert methods of entry and facility mapping
- Security system bypass and access control hacking
- Signals intelligence gathering and communication interception

The Reality Check:

Your security team gets tested by operators who've spent their careers thinking like adversaries, not consultants reading from checklists.

Force-on-Force Exercises

Live-Fire Readiness Without the Live Fire

High consequence scenarios demand high fidelity training. Our force-on-forceexercises pit your security personnel against our HI-CAF operators in realistic threat scenarios that stress-test response times, communication protocols, and tactical decision-making under pressure.

Exercise Components:

- Facility specific scenario development and drill matrix creation
- Real-time tactical engagements with professional opposition forces
- Multiphase attacks testing detection, response, and containment
- Live evaluation of security modifications and engineered solutions
- Comprehensive analysis with performance metrics

The Advantage:

Your team faces tomorrow's threats today with professional opposition that adapts, improvises, and exploits weaknesses in real time.

HOLTEC SECURITY INTERNATIONAL

Security Special Operations (SSO)

Test Your Defenses. Before Adversaries Do.

What we deliver	Why it matters
Regulatory Alignment	Our CAF team meets the most stringent federal requirements—Reg. Guide 5.69, NEI 0311, NEI 0505, plus DOE Protective Force standards—ensuring your assessments satisfy even the most demanding auditors
Proven Operators	Former military, law enforcement, and nuclear security professionals who understand both adversary tactics and defensive realities.
Site-Specific Intelligence	We don't run cookie-cutter scenarios. Every assessment begins with detailed facility analysis, threat profiling, and custom scenario development.
Zero Disruption Protocols	Assessments integrate with operational schedules, maintaining business continuity while delivering maximum stress-test value.
Measurable Results	Detailed gap analysis, prioritized remediation recommendations, and ROI calculations for security investments.
Cross-Service Integration	Quantifiable improvements in detection, coverage, and cost efficiency

Security Training Services

Mission-Ready Training. Forged by Experience.

Trusted nationwide by law enforcement and civilians, our mobile teams train on-site. With 30 years in the field and 20 teaching, our operator-led programs forge real competence under pressure—not check-the-box compliance.

- **Professional Training** - Advanced tactical programs, instructor development, low-light/high-threat ops.
- **Civilian Training** - Permit to Carry, defensive awareness, private/group instruction.

Who We Serve

Utilities, nuclear facilities, transportation hubs, and industrial operators requiring verifiable readiness and compliance under DOE, NERC, and DHS oversight.

Ready to Discover What You Don't Know?

Your facility's security is only as strong as its weakest moment under real pressure. Our SSO team reveals those moments and gives you the intelligence to eliminate them. Every assessment begins with a comprehensive site evaluation and threat analysis.

Don't wait for an actual breach to test your defenses. Contact us today.
